

## The bed shower

*For individuals and home care services*

The bed shower concept by AJC L'Authentic is designed to administer a shower directly on the bed. This simple device, specially designed for home care, requires a simple, single electrical outlet for operation.

### The solution that optimises the bed bath

The bed protection system is installed in the same way as a sheet change, with the patient on the bed. **Handling is identical.**

The trolley houses two reservoirs:  
One for the supply of clean water  
Another for the drainage of used water

**Compact (L.55cm x W. 38 cm x H. 40 cm), and light weight (10 kg),** it can easily be transported in any vehicle and used by anybody.

**An integrated pump enables the device to suck the used water.**

#### **This concept permits:**

- reduction of the risk of skin infection,
- Improvisation of the healing process of bedsores,
- the maintenance of the natural protection of the skin,
- facilitation of staff tasks.
